

DANAI PUTTACHART

Full Stack Developer | Backend & System Developer

☎ 063-085-3795 ✉ danai.puttt@gmail.com

SUMMARY

Full Stack Developer with hands-on experience developing internal enterprise systems, real-time monitoring platforms, and IoT applications. Skilled in backend API development, MQTT communication workflows, MongoDB schema design, and production deployment using Google Cloud VM, Nginx, and PM2.

SKILLS

Frontend

React.js, Next.js, TypeScript

Backend

Node.js, Express.js, RESTful APIs

Database

MongoDB, Firebase

Real-time & IoT

MQTT, Telemetry Processing, OTA Workflow

Infrastructure

Google Cloud VM, Nginx, PM2, SSL
Certificates (Certbot)

Tools

Git, Postman, MQTXX, Figma

EDUCATION

Multimedia and Entertainment Engineering

Bangkok University

2018 – 2022

Second Class Honors — GPA 3.56

PROFESSIONAL EXPERIENCE

● Software Developer

PATANA INTERCOOL Co., Ltd.

Apr 2024 – Jan 2026

Internal Business Systems

- Developed and maintained internal business systems including asset inventory management, employee service platforms, stock identification systems, and operational workflow solutions
- Designed and developed RESTful APIs and MongoDB database structures using Node.js and Express.js for scalable internal service integration
- Collaborated with business users and internal departments to analyze requirements and design workflow-oriented operational systems

Real-time IoT & Monitoring Systems

- Developed real-time monitoring platforms and MQTT communication workflows for industrial refrigeration devices
- Implemented telemetry data ingestion, device state synchronization, alarm monitoring, and remote command execution workflows
- Built real-time dashboards supporting telemetry visualization, alarm tracking, and remote device configuration
- Supported OTA firmware update workflows including version validation, event logging, and device response handling

Backend & API Development

- Developed centralized REST API services for employee data management, Telegram notifications, VM health monitoring, and internal operational systems
- Implemented role-based access control, payload validation, session-based authentication, and audit logging workflows
- Optimized MongoDB queries, filtering workflows, indexing strategies, and telemetry data handling for production usage

Infrastructure & Deployment

- Performed manual production deployments, application updates, log monitoring, troubleshooting, and server maintenance for VM-based environments
- Configured Nginx reverse proxy, SSL certificates using Certbot, domain routing, and PM2 process management for production environments
